

DYNASAN® CrystalCONTROL L

Formulator's jewel for worry-free processes

Natural vegan polymorphic-free solid lipid, helping to control crystallization and coloring processes, while offering better moisturization, gliding and pay-off

DYNASAN® CrystalCONTROL L

Formulator's jewel for worry-free processes

ABOUT...

- Polymorphic-free solid lipid
- Controls (re-)crystallization of polymorphic ingredients and thus controls blooming in lipid based anhydrous systems
- Batch-to-batch consistent quality and white color
- Easy-to-work with (broadly compatible, flakes)
- No seasonal variation linked to inconsistent raw materials supply
- Leads to a significant improvement of skin moisturization from the first application
- Film-forming, diminishes transepidermal water loss (TEWL)

...SENSORIAL...

- High gliding for easy applications on lip, eye, face and body
- Pleasant pay-off for more vivid colors
- Creamy feel, melting on skin
- Anhydrous formulas with DYNASAN® CrystalCONTROL L show:
 - High gliding
 - High pay-off
 - Low stickiness
 - Low oiliness
 - Medium film-forming

...EMOTIONS

- 100 % renewable sources (RSPO MB Palm, Rapeseed, Castor & Sunflower)
- 100 % natural (ISO 16128 NOI of 1.0, COSMOS and NaTrue conform)
- Vegan compatible
- Worry-free (re-)heating and cooling process – DYNASAN® CrystalCONTROL L always shows its stable, lowest energy form
- Less out-of-specification batches, increased production output, less production waste
- Contributes to a higher trust in brand

Blooming Effect

Blooming is an effect that occurs when certain solid components of a material mixture change their state of crystallinity at microscopic level leading to a change in macroscopic level observed as white spots.

Materials causing blooming are especially triglycerides like natural butters or waxes.

DYNASAN® CrystalCONTROL L helps to:

- Control crystallization in formulas
- Delay or even cancel blooming effect
- Allow worry-free heating & cooling processes

Surface Cracking

Polymorphic ingredients (e.g., natural waxes and butters) can cause unwanted cracking leading to an uneven surface with voids.

DYNASAN® CrystalCONTROL L helps to:

- Avoid cracking, even after storage
- Achieve a smooth, even surface

Consistent (White) Color

Lipsticks and balms with DYNASAN® CrystalCONTROL L show lighter color values and ease color matching process for color formulators

INCI

Polyglyceryl-3 Tetrastearate

DESCRIPTION

Natural ester based on polyglycerin and stearic acid

APPEARANCE, COLOR & ODOR

White solid (flakes) with characteristic odor

MELTING RANGE

58 – 64 °C

RECOMMENDED CONCENTRATION

5 – 20 % for sticks and solid cosmetics
2 – 10 % for balms

BENEFITS FOR...

...FORMULATOR

- Broadly compatible
- Helps controlling blooming effect
- Consistent batch color

...PRODUCTION

- Easy to manipulate
- More output and batch conformity
- Contributes to lower wastes

...BRAND

- May help lower environmental impact
- Helps prevent blooming at customers
- Contributes to a higher trust in brand

...CONSUMER

- High gliding for easy applications
- Pleasant pay-off for more vivid colors
- Moisturizing, skin barrier protecting
